The Research and Evaluation Methodology (REM) graduate program provides students with expertise in designing evaluations of educational programs; analyzing educational data such as SAT, ACT, GRE, and FCAT scores; and coordinating the development and implementation of educational assessments.
Learn to evaluate educational programs, analyze educational data, develop assessment instruments, and conduct research about the efficacy of research methodologies.

Work as an educational researcher, an educational data analyst, or a psychometrician (an expert in the statistical models behind tests such as the SAT, ACT, MCAT, and LSAT).

Find jobs in testing companies; research and evaluation companies; research centers; and assessment centers at universities, school districts, and state and federal agencies.

Complete a master’s degree (M.A.E. or M.Ed.) in two years or a Ph.D. in four years with classes focusing on research methodology, statistics applied to education, program evaluation, and educational measurement.

We admit students with some undergraduate statistics experience. Our students come from a variety of backgrounds, including psychology, statistics, mathematics, marketing, economics, and engineering.
