

# University of Florida Scope of Work

---

**Project Title:** Project HaHa: Low-Cost Hands-on Hardware Security Education

**Project Description** (including objectives, tasks, and deliverables as applicable): This project is to provide hardware security education using HaHa modules (hands-on hardware security education) to instructors and students for various Florida institutions and entities.

## **Objective or purpose**

The objective is to work with FIU and other collaborators to deliver hardware security education training to instructors and their students to improve their knowledge and skills related with hardware security.

UF team will work with FIU and other partners to provide support for professional development workshops, deliver integrated and new courses for hardware security at UF, and contribute to research and evaluation and outreach efforts.

- 1) Help provide professional development training for instructors from various institutions. The instructors participated the training should be able to teach hardware security using HaHa modules.
- 2) Help instructors at UF prepare courses to integrate HaHa modules into their existing classes and new classes. Instructors should get their integrated courses and new courses ready to offer.
- 3) Coordinate the effort for delivering the integrated courses and new courses for hardware security education. Instructors offers these courses in the performance period.
- 4) Help the educational research and evaluation efforts. Collected data and data analysis for reporting.
- 5) Actively engage in outreach, dissemination effort for HaHa modules. Reach out to local schools and partners to promote HaHa modules.
