

Science Education Online Distance Learning Course

Scope of Work

The University of Florida will provide services to Bruno White Entertainment in the development of a fully online distance learning course focused on physics as well as content which will assist learners in a better understanding of materials corrosion phenomena, including materials sustainment, corrosion prevention, and corrosion mitigation. The tentative title for the course is “Engineering the Renaissance.” UF will design and develop (1) a fully online, ready to use, high production value distance learning course, (2) assessment and related testing materials, (3) instructor guidelines for course implementation, and (4) written technical information for course implementation (e.g., use in Learning Management System applications).

BWE will produce a series of high production videos that will be included in the distance learning course. As such, members of the UF subject matter expert and course production teams will collaborate with BWE in the outline, storyboarding, and production of BWE videos on a schedule provided by BWE.
