

Office of Early Learning Web Portal

The University of Florida Partnership, a collaboration of the Family Data Center and the Lastinger Center, was tasked by the Office of Early Learning to update and enhance the Florida Early Care and Education Needs Assessment Data Portal.

The data portal provides actionable data for stakeholders to identify both well-served and under-served areas at multiple geographic levels, including ZIP codes, counties, early learning coalitions, and statewide. By combining information about demand (children and families) and supply (capacity and quality of early childhood providers), users can customize data searches to construct reports to support informed decisions for Florida's preschool population.
